

Apple Technology Knowledge Base

Sample document for learning PDF ingestion, chunking, embeddings, FAISS vector search, Neo4j graph retrieval, and Hybrid RAG.

1. Apple Inc. Overview

Apple Inc. is a technology company that develops and sells consumer electronics, software, and digital services. The company is headquartered in Cupertino, California.

Apple's major product categories include smartphones, computers, tablets, wearable devices, and related software and services.

The company is widely associated with products such as the iPhone, Mac, iPad, Apple Watch, and AirPods.

2. Founders and Leadership

Apple was founded by Steve Jobs, Steve Wozniak, and Ronald Wayne in 1976.

Steve Jobs was a co-founder of Apple and played an important role in the development and direction of several major Apple products.

Steve Wozniak was a co-founder and an important engineering figure during Apple's early years.

Ronald Wayne was also involved as a co-founder during the company's early formation.

Tim Cook is the CEO of Apple. He became CEO after Steve Jobs and has led the company since 2011.

3. iPhone

The iPhone is a smartphone product developed and produced by Apple.

The first iPhone was introduced in 2007. It combined phone, internet, and media capabilities in a touchscreen device.

Modern iPhone models support applications, cameras, wireless connectivity, biometric security, and integration with Apple's software and services.

4. Mac and macOS

The Mac is Apple's family of personal computers. It includes desktop and laptop computers.

Mac computers run Apple's macOS operating system. macOS provides a graphical user interface, file management, application support, and integration with other Apple devices.

Mac computers are used for software development, business, education, creative work, and general computing.

5. iPad

The iPad is Apple's tablet computer product line.

iPad devices are designed for web browsing, reading, media consumption, communication, productivity, drawing, and other tasks.

The iPad product family includes different models designed for different performance and portability needs.

6. Apple Watch and AirPods

Apple Watch is a wearable device designed to work closely with Apple's ecosystem. It supports notifications, applications, communication features, and health and fitness-related capabilities.

AirPods are Apple's wireless earbuds. They provide wireless audio and can integrate with Apple devices through the company's ecosystem.

7. Apple Software and Services

Apple develops software platforms including iOS, iPadOS, macOS, watchOS, and related operating systems.

Apple also provides services such as iCloud, Apple Music, Apple TV+, and the App Store.

These software and services help connect Apple hardware products into a common ecosystem.

8. Relationships for Knowledge Graph Retrieval

Steve Jobs was a co-founder of Apple.

Steve Wozniak was a co-founder of Apple.

Ronald Wayne was a co-founder of Apple.

Tim Cook is the CEO of Apple.

Apple produces the iPhone.

Apple produces the iPad.

Apple produces Mac computers.

Apple produces Apple Watch.

Apple produces AirPods.

The iPhone uses Apple's iOS platform.

Mac computers use Apple's macOS platform.

9. Example Questions for RAG Testing

Who founded Apple?

Who is the CEO of Apple?

What is the iPhone?

What products does Apple produce?

What operating system does the iPhone use?

What is the difference between the iPhone and iPad?

Who were the co-founders of Apple?

What is Apple Watch?

What is macOS?

Which Apple products are mentioned in the knowledge base?
